# SATELLITE INDUSTRY DAYS – PART 4

Unlocking the Future of Satellite Communications in Europe with IRIS<sup>2</sup>

Save your spot

## Invitation

Get ready for the fourth part of our **Satellite Industry Days**. Our series of online events where we discuss the latest in satellite technology with leading industry experts. We're keeping the conversation going and addressing the newest developments in the Infrastructure for Resilience, Interconnection & Security by Satellite (IRIS<sup>2</sup>) project: the European Commission's quest for reliable, secure satellite communications.

Together, we'll delve into the European Protected Waveform (EPW), a new standard for secure and interoperable satellite communications. We'll also discuss a European industry initiative for developing and launching nano- and micro-satellites, which are revolutionizing space exploration. As guest speakers, we are thrilled to welcome experts from Euroconsult, STE iDirect Europe and GomSpace.

But that's not all - two ITU representatives will also be present to provide valuable insight into the complex international regulatory framework for non-geostationary satellite systems. With the international coordination that is required to launch non-geostationary satellites, the importance of this topic cannot be overstated.

**Date:** May 25, 2023, from 15:00 to 17:10 CEST

Sounds interesting? [Check out the detailed agenda and speaker's biographies here.](#)
