Power Electronics: From Reliable Testing to Compliance

Rohde & Schwarz, Altoo Measurement Science & ZES Zimmer
welcome you a powerful seminar day

Modern power electronics demand more from both the design and the measurement setup. During this seminar, we will explore practical approaches to testing and validating today's high-performance power systems.

Discover how to create realistic test conditions, use modern oscilloscopes for three-phase power analysis, achieve accurate and repeatable efficiency measurements, and navigate increasingly demanding compliance requirements.

With examples from battery systems, PV, motor drives and grid-connected applications, the sessions will connect measurement theory with real-world engineering challenges, helping you move confidently from development and verification towards compliance.

Join us for a day of practical insights, demonstrations and discussions with power electronics and measurement experts.
